

**AMENDMENT TO THE CLAIMS**

1. (Reinstated and Amended) A system for locating and tracking a wireless device, the system comprising:

a database remotely located from the wireless device, the database operable for receiving and storing position information from the wireless device at a predetermined interval;

a wireless network operable for communicating the position information from the wireless device to the database; and

an ~~first~~ algorithm operable for providing the position information upon request, the algorithm for plotting movement along a course and extrapolating current location information in the absence of a current location data point.

2. (Reinstated and Amended) The system of claim 1, wherein the ~~first~~ algorithm is operable for providing the position information to a user upon the request of the user.
3. (Reinstated and Amended) The system of claim 1, ~~further comprising a second~~ wherein the algorithm allowing allows a user to modify the predetermined interval.
4. (Reinstated) The system of claim 1, wherein the position information comprises position information selected from the group consisting of latitude, longitude, altitude, direction of movement, an audio representation of position, and a video representation of position.
5. (Reinstated and Amended) The system of claim 1, ~~further comprising a third~~ wherein the algorithm operable for associating associates a landmark with the position information.
6. (Canceled)

7. (Reinstated) The system of claim 1, wherein the position information is provided to a user via a land-line phone and a public switched telephone network (PSTN), the land-line phone and the PSTN in communication with the database.
8. (Reinstated) The system of claim 1, wherein the position information is provided to a user via a finding wireless device and the wireless network, the finding wireless device and the wireless network in communication with the database.
9. (Reinstated) The system of claim 1, wherein the position information is provided to a user via a personal computer (PC) and a globally-distributed computer network, the PC and the globally-distributed computer network in communication with the database.
10. (Reinstated) The system of claim 1, wherein the position information is provided to a user in the form of a voice synthetic message.
11. (Reinstated) The system of claim 1, wherein the position information is provided to a user in the form of a text message.
12. (Reinstated) The system of claim 1, wherein the position information is provided to a user in the form of a graphical display.
13. (Reinstated) The system of claim 1, wherein the wireless network comprises an Internet Protocol (IP)-based service network.
14. (Reinstated and Amended) The system of claim 1, ~~further comprising a fourth wherein~~ the algorithm operable for causing causes the position of the wireless device to be determined locally at the predetermined interval.

15. (Reinstated and Amended) The system of claim 14, ~~further comprising a fourth wherein~~ the algorithm operable for causing causes the position information to be stored locally within the wireless device.
16. (Currently Amended) The system of claim 1, wherein the algorithm causes the position information to be communicated to the database via the wireless network when the battery power of the wireless device reaches a predetermined level ~~A system for locating and tracking a wireless device, the system comprising:~~
- ~~a database remotely located from the wireless device, the database operable for receiving and storing position information from the wireless device at a predetermined interval;~~
  - ~~a wireless network operable for communicating the position information from the wireless device to the database;~~
  - ~~a first algorithm for providing the position information; and~~
  - ~~a second algorithm operable for causing the position information to be communicated to the database via the wireless network when the battery power of the wireless device reaches a predetermined level.~~
17. (Reinstated) The system of claim 1, wherein the wireless device comprises a wireless device selected from the group consisting of a cellular phone, a pager, a personal digital assistant (PDA), and a laptop computer.
18. (Reinstated and Amended) A method for locating and tracking a wireless device, the method comprising:
- at a predetermined interval, receiving position information from the wireless device via a wireless network;
  - storing the position information in a database, the database remotely located from the wireless device;

~~upon request, using~~ providing the position information to plot movement along a course and to extrapolate current location information in the absence of a current location data point.

19. (Reinstated and Amended) The method of claim 18, ~~wherein providing the position information~~ further comprising ~~comprises~~ providing the position information to a user upon the request of the user.
20. (Reinstated) The method of claim 18, further comprising allowing a user to modify the predetermined interval.
21. (Reinstated) The method of claim 18, wherein the position information comprises position information selected from the group consisting of latitude, longitude, altitude, direction of movement, an audio representation of position, and a video representation of position.
22. (Reinstated) The method of claim 18, further comprising associating a landmark with the position information.
23. (Reinstated) The method of claim 18, further comprising providing information related to the associated landmark to a user.
24. (Reinstated) The method of claim 18, wherein the position information is provided to a user via a land-line phone and a public switched telephone network (PSTN), the land-line phone and the PSTN in communication with the database.
25. (Reinstated) The method of claim 18, wherein the position information is provided to a user via a finding wireless device and the wireless network, the finding wireless device and the wireless network in communication with the database.

26. (Reinstated) The method of claim 18, wherein the position information is provided to a user via a personal computer (PC) and a globally-distributed computer network, the PC and the globally-distributed computer network in communication with the database.
27. (Reinstated) The method of claim 18, wherein the position information is provided to a user in the form of a voice synthetic message.
28. (Reinstated) The method of claim 18, wherein the position information is provided to a user in the form of a text message.
29. (Reinstated) The method of claim 18, wherein the position information is provided to a user in the form of a graphical display.
30. (Reinstated) The method of claim 18, wherein the wireless network comprises an Internet Protocol (IP)-based service network.
31. (Reinstated & Amended) The method of claim 18, further comprising ~~providing a first algorithm operable for~~ causing the position of the wireless device to be determined locally at the predetermined interval.
32. (Reinstated & Amended) The method of claim 18, further comprising ~~providing a second operable for~~ causing the position information to be stored locally within the wireless device.
33. (Currently Amended) The method of claim 18, further comprising communicating the position information to the database via the wireless network when battery power of the wireless device reaches a predetermined level ~~A method for locating and tracking a wireless device, the method comprising:~~

~~at a predetermined interval, receiving position information from the wireless device via a wireless network;~~

~~storing the position information in a database, the database remotely located from the wireless device;~~

~~upon request, providing the position information; and~~

~~causing the position information to be communicated to the database via the wireless network when the battery power of the wireless device reaches a predetermined level.~~

34. (Reinstated) The method of claim 18, wherein the wireless device comprises a wireless device selected from the group consisting of a cellular phone, a pager, a personal digital assistant (PDA), and a laptop computer.
